

Toroidal Electron Model

Electromagnetic energy confined in a torus with linked E and B fields

$$\mathbf{H} = \pm 1 \quad \square \quad \mathbf{Q} = \pm e$$

Topological invariant \square *quantized charge*

Figure 2: Toroidal electron — E-field (external Coulomb) and B-field (poloidal) with Hopf linking $H = \pm 1$, showing photon helical path and cross-section
